# BROMPTON RD, STADLER AVE, & NEWTON AVE WATERMAIN REPLACEMENT AND RELINING

## Background

Based on a study conducted in 2021 conducted by JML Engineering, the following objectives are highlighted:

- ❖ Improve water quality to residences along Brompton Rd, Stadler Ave, Newton Ave, and Frost St.
- ❖ Improve storm and sanitary sewer infrastructure along Brompton Rd.
- ❖ Reconstruct asphalt and curbs along Brompton Rd.

## Preferred Option for Upgrades

### Brompton Avenue

- ✓ To improve the water quality on Brompton Rd, the watermain, shall be replaced and a new watermain extension from Brompton to Stadler shall be constructed to reduce the dead end length.
- ✓ Sanitary sewer, storm sewer, asphalt, curbs, and gutters shall also be replaced.

### Stadler Ave, Frost St, and Newton Ave.

- ✓ To improve the water quality on these streets, relining of the watermain will be conducted. The pavement will be repaired at access points for the relining.
- ✓ Cement mortar relining extends the life of the watermain.

## Project Schedule

1. Spring 2022 - Relining of the specified watermains.
2. Summer 2022 - Reconstruction of Brompton Rd.

This project is funded in part by the Government of Canada and the Government of Ontario.
